

AND ON THE 4TH DAY  
GOD CREATED A  
SOLAR FUSION  
REACTOR.

It's up to YOU to build the  
fusion engine that can  
harness the power!

New Power for a New World

## EMERGENCY LIGHTING & MORE

**I**magine electrical power and in-floor heating from a single solar engine system!

- Blackout protection
- Reliable solar power from low-value heat
- Outperforms bladed turbines

This *infinite-life* heat engine supplies approximately 1-kW continuous personal power.

**BONUS:** When solar flares knock out PV panels & computerized “smart grids” - your turbogenerator keeps providing energy security. It does NOT require shielding against astronomical events!

## COMPLETE PLANS!

- ➔ Printable technical drawings for machinists who don't have CAD capability.
- ➔ CAD files that your local machine shop can use to cut parts.

## ALL-IN-ONE UNIT— TURBINE/GENERATOR

No need to buy a generator to hook up to this steam turbine. The alternator is built into the case!

**View demo on YouTube!**

FREE HOW-TO CLASSES WITH YOUR CD PLANS!

**B**ecome a turbo-machinery expert by building from scratch.

Designer Ken Rieli will show you how to build his \$15,000 turbine generator technology—for \$500 or less at the online New Turbine Workshop.

- Step-by-step classes & videos show you how to assemble parts
- Turbogen Central online support
- Build at your own pace. Buy parts as your budget allows.

Cut your energy bills, and your dependence on centralized utilities.

IF THE SUN REFUSES TO SHINE—SWITCH TO BIOMASS STEAM MODE!

Ken Rieli specifically designed his turbogenerator for multi-source applications:

- Solar steam
- Compressed air
- Biomass/biofuels steam

So if the sun doesn't shine & the wind doesn't blow, your biomass steam generator will still charge your batteries. The unit also works with ORC (organic Rankine cycle) fluids.
